

SOFTWARE JANUARY 1982 SOFTWARE ALERT

Now that the new year has arrived, we would like to introduce you to a new communication brochure which will be produced at the beginning of each quarter. This brochure is intended to communicate to you the current status of our software products, new and existing, and any other new information pertinent to our products.

In this issue, we have included three documents which we hope will be of help to you. First, we have the status report on each product with a final section that highlights new products that will be introduced within the quarter. And finally, we have included a Software Product Configuration Grid which shows the hardware configurations that each product can be used with.

This quarter we will introduce at least five new software products which we feel will help our dealers sell some systems. These packages are highlighted in the back of the bulletin under "New Products". The first of these, UCSD Pascal, is Softech Microsystems' latest version (4.0) of this package and has been a big seller on other micros. We expect it to be a big seller on our system also because of its capabilities to be used as a development system, and because there are already a number of business packages written for the system which can now be sold on our machine.

Two other products of interest are programmers' tools, CMAR Record Handling System, and Petspeed BASIC Compiler. Both of these products will be helpful to those individuals writing their own applications and we feel that they are much better than similar products on the market.

Finally, we will be introducing three business packages, two vertical market packages and one general business package. The first to be released is called Atlas 1200. This package is a vertical market package aimed at those businesses that service or lease equipment to other businesses. The next package, Freight Rating and Invoice System, is another vertical market package aimed at the freight transportation business. And finally we will introduce the Titan Job Cost System, which we feel will be a good competitor for similar products already on the market.

We have just received shipment of the second edition of the Software Encyclopedia, so each region will be receiving a supply shortly. It has been professionally done, and is 406 pages long including over a thousand entries.

Finally, we would like to inform you that the advertising department is putting together an advertising campaign aimed toward the Legal and Medical markets. It will place some emphasis on our current products LTA and MAS, and also our word processing package, Wordcraft 80. We hope it will help boost our sales of systems in these areas.

CURRENT PRODUCTS

OZZ - Information Management

Description: This package can be described as a total database management system. It gives the user the capability to design a data base management and retrieval system in a format that is geared toward their own application. It allows the user to store, access, manipulate, edit and perform calculations on the data. It has the capability to store 364,000 characters per file, for example, if the record size is 100, the file can contain a maximum of 3640 records.

Availability: Available now.

Configuration: 8032/8050 or 4040.

Professional Tax Preparation System

Description: The 1981 version of this package will be entitled "The Professional Tax Preparation System", and as such, is designed for use by a professional Tax Accountant or Consultant. It has been greatly enhanced and will compute all of the following schedules and forms:

- o 1040 long or short form
- o Schedules A,B,C,D,G,TC,SE,E,F,
2106,2441,2210,3903,3468,5695,1040-ES

It also has the capability to do regular or "income averaging", and simultaneous separate or joint returns.

Finally, it will compute State 1040 forms for California, New Jersey, New York, Pennsylvania, and Florida.

The package was programmed to print on either the actual IRS forms or a specially designed "IRS" approved form. A packet containing samples of this form, and a vendor who will supply them, is packaged with the product.

Availability: The 1981 version will be available the first week of January, 1982.

Configuration: 8032/8050 or 4040.
4032/8050 or 4040.

CURRENT PRODUCTS

LTA - Legal Time Accounting

Description: LTA allows law firms to automatically process matters by client, lawyer, and activity simply by recording log entries. It is a truly vertical market package, aimed at the legal firm with 3 to 5 lawyers, and will provide valuable management reports.

Availability: Version 2.0 of the package is now available through us. We have made a substantial effort to locate and upgrade all previous versions, but if you should need to, we will continue to upgrade anyone at no cost to the 2.0 level. The new update manuals are now available for anyone needing it.

Configuration: 8032/8050.

Dow Jones Portfolio Management System

Description: This package is for the investor who would like an easy way to keep his/her portfolio in order and to be able to make "instant" decisions. It provides "on-line" access to 6000 stock quotes daily and historical data and news stories on these same companies. It will maintain and control stock portfolios and provide tax records of all transactions. In addition, the user has "on-line" access to the Wall Street Journal, Barrons, and other Dow Jones services.

Availability: The RS232 DC Hayes version of the package is currently available. This version will be shipped with a modem cable that interfaces with the DC Hayes Smartmodem.

Configuration: 8032/8050 or 4040.

IRMA - Information Retrieval and Management Aid

Description: This product is designed for the professional recruiting firm that wishes to computerize their search and fulfillment needs. It allows for the entry and retrieval of items based on multiple search criteria.

Availability: Currently available.

Configuration: 8032/8050 or 4040.
4032/8050 or 4040.

CURRENT PRODUCTS

Compiled Integer Basic

Description: This product allows the user to produce quickly and easily, machine language programs that can be self contained or be used as subroutines. A compiled program will execute up to 100 times faster than the same code written in BASIC. It should be noted, however, that the version of BASIC that is used with Integer Compiler is a little different from CBM BASIC, so existing programs may have to be changed a little. Also this product is designed for the computer literate person, as it demands a higher level of expertise for correct operation and use.

Availability: This product is available now.

Configuration: 8032/8050 or 4040.
4032/8050 or 4040.

Assembler Development Package

Description: The product has all the utilities necessary for the creation and maintenance of 6502 machine language programs. It includes an Editor, Assembler, Loader. In addition, the user can build libraries and files which can then be linked up by the assembler. This program is used by CBM to write all system firmware.

Availability: Currently available.

Configuration: BASIC 3.0 or 4.0.
2001/8050 or 4040.
8032/8050 or 4040.
4032/8050 or 4040.

TCL Pascal Development System

Description: This product is an implementation of the standard Pascal designed for small computers. It offers all the features of this powerful language, with some additional enhancements for micro use. It is an ideal package for a learning environment.

Availability: Version 1.6 (BASIC 4.0) is available now.

Configuration: 8032/8050 or 4040.

NEW PRODUCTS

Atlas 1200 - Service & Equipment Maintenance System

Description: This product, the first in a series of five business packages that will be released this year, is a vertical market package designed for the professional Service and Equipment Maintenance firm. It's capabilities include an accounts receivable system, a financial reports section, and other reports specific to this type of business, such as a P.M. log.

Availability: This product will be available as of February 15, 1982.

Configuration: 8032/8050.

Titan - Job Cost System

Description: This product is the second in our series of business packages. It will be a fully integrated Job Cost System that is professionally done and features all the capabilities of any other Job Cost package on the market.

Availability: This product will be available as of March 15, 1982.

Configuration: 8032/8050.

Freight Rating and Invoice System

Description: This is another vertical market package aimed at the transportation industry. It will provide freight rating according to the specific tariffs set forth by the Interstate Commerce Commission. Some of it's capabilities include automatic rating using the rate base, weight break and commodity for the tariff assigned, and invoice generation based on this data.

Availability: This product will be available as of March 15, 1982.

Configuration: 8032/8050.
